U.S. Drought Monitor

September 17, 2019

(Released Thursday, Sep. 19, 2019)

Valid 8 a.m. EDT

Drought Impact Types:

~ Delineates dominant impacts

S = Short-Term, typically less than 6 months (e.g. agriculture, grasslands)

L = Long-Term, typically greater than 6 months (e.g. hydrology, ecology)

Intensity:

None

D0 Abnormally Dry

D1 Moderate Drought

D2 Severe Drought

D3 Extreme Drought

D4 Exceptional Drought

Author:

Eric Luebbehusen

U.S. Department of Agriculture

The Drought Monitor focuses on broad-scale conditions. Local conditions may vary. See accompanying text summary for forecast statements.

Evaporative Demand Drought Index

EDDI can offer early warning of agricultural drought, hydrologic drought, and fire-weather risk by providing near-real-time information on the emergence or persistence of anomalous evaporative demand in a region. A particular strength of EDDI is in capturing the precursor signals of water stress at weekly to monthly timescales, which makes EDDI a strong tool for preparedness for both flash droughts and ongoing droughts.

Ag Highlights

- 6.6 days suitable for fieldwork last week through September 22
- Dry conditions impacting soils, some crop stress, but allowing hay making to finish up
- Winter Wheat planting a bit ahead of schedule

NASS: Cheryl Turner —

https://www.nass.usda.gov/Statistics_by_State/Ohio/Publications/Crop_Progress_&_Condition/2019/cw1719oh.pdf

Summary of Conditions

Drought Monitor: Expanding dry and low level drought conditions, especially in the west

Climate Recap: Very dry across much of the state, well above normal temperatures

The week ahead: A short-lived opportunity for rainfall this week with temperatures become much above normal again by the weekend
